| Course: BSc(Hons) Applied Software Development (UI310) |
| Module: Long Tail of the Software Lifecycle |

This module complements "Enterprise Transformation" focusing on businesses that have existing code bases that students may need to maintain when entering the workplace. Students will learn about common industry standards and how these are applied in the workplace. This module will allow students to look at industry and security trends and to evaluate how these might affect the industry in the following years. Technical skills will include looking at mainframes and legacy languages, identifying how to manage the change process in the face of these challenges.
